

Why work for Chiron

Chiron AS provides the scientific community worldwide with sophisticated solutions for difficult chemical analysis. Since 1983 Chiron has supplied reference materials, fine chemicals and reagents for toxicological, pharmaceutical, environmental, food safety, petroleum and geochemical analysis. Chiron's offering consists of more than 15,000 unique products, and if you can't find what you are looking for, Chiron also provide a custom synthesis service for microgram to kilogram quantities. Chiron is headquartered in Trondheim, Norway, has a UK subsidiary, and operates through a competent global network of distributors. Many years of investment, the enthusiasm and pioneering team spirit of its staff, and a close cooperation with academic institutions and customers worldwide has brought Chiron to the forefront of analytical chemistry.

We recognise that finding the right employees is also about ensuring the position and company is right for them! That's why we asked our staff to share their experiences of working with Chiron.

International Sales Specialist, 2 years at Chiron

//

Working for Chiron has been a dream! Although I'm based in the UK and work from home, I still feel like I travel the world as I interact with clients from all over the globe. I adore the team at the Norway office, and they are always super helpful. Some perks include travel and attending conferences (COVID dependent), working with R&D on synthesis proposals, and looking for new and innovative ways to expand our territories. Our product ranges keep expanding and there's no boundary to what you can learn. In a sense, I feel like many of our products are helping save the planet since some play a key role in environmental testing.

CASEY

New employee in the R&D department at Chiron

//

Working at Chiron, I get to be a part of a highly competent and inspiring team. Every day offers new challenges allowing me to constantly develop as a chemist. My friendly colleagues are always eager to share their knowledge, and are more than happy to answer any questions. These things make Chiron a safe and welcoming place to work. In addition we also have activities outside the workplace such as rock-climbing and «payday-beers» to name a few.

Analyst in the Quality Control department, 13 years at Chiron

//

I have been so lucky to be part of an exciting journey, and the working day constantly gives me replenishment of interesting tasks. We have very good contact with the managers as we are a relatively small company. This allows us to easily discuss challenges, and we get a lot of problems solved in this way. I am happy to avoid heavy administrative roads to get to the finish line. There are relatively young people and a good working environment where we can complete tasks together. We try to be an inclusive company, also in our free time, where we undertake social activities such as skiing, climbing in a nearby boulder hall and gathering for a payday. We are all encouraged to all be a little leaders, it gives us room to make suggestions for improvements. For me the work at Chiron fulfills my wish to have an exciting and interesting everyday life.

HÅKON

Production Manager, 5 years at Chiron

//

I started in the production department 5 years ago and advanced to become the production manager a year ago. Here at Chiron, there are many and varied challenges, every day. As a small company, we have a flat structure and the distance to other colleagues and the management is very short. There are professional people in all levels in the company, and you get quick help and support with problems or challenges. The social environment is very good, with common lunches where everything from politics, animal husbandry to football is discussed. We are a company in development
