NEW PSYCHOACTIVE SUBSTANCES

New psychoactive substances (NPS) (designer drugs, research chemicals, “legal highs”) have been emerging onto the recreational drug scene at an unprecedented rate. In parallel the number of substances notified to the EU Early Warning System (EWS) for the first time is increasing year on year, and shows no signs of abating. In 2014, 101 new compounds were reported. This represented an increase of 25 % compared with 2013. The EU Early Warning System is currently monitoring more than 450 substances.

NPS have emerged from a number of different chemical classes (Piperazines, cathinones, phenethylamines, aminoindanes, piperidines and pyrrolidines, benzofurans, arylcyclohexylamines, tryptamines, synthetic cannabinoids...), most of which fall broadly into three categories: stimulants, hallucinogens or synthetic cannabinoids. Outwith these have been a handful of synthetic opioids, including AH-7921 and MT-45 and an increasing number of uncontrolled benzodiazepines. Synthetic cathinones, were the largest category of new drugs identified in Europe in 2014, followed by synthetic cannabinoids. Thirteen compounds detected did not fit easily into any of the substance groups monitored.

Chiron strive to meet customer demand for NPS reference materials, and work closely with clinical and forensic institutions to this effect. This mini-catalogue lists a wide range of standards for NPS and associated substances.

“New psychoactive substance: a new narcotic or psychotropic drug, in pure form or in preparation, that is not controlled by the 1961 United Nations Single Convention on Narcotic Drugs or the 1971 United Nations Convention on Psychotropic Substances, but which may pose a public health threat comparable to that posed by substances listed in these conventions (Council Decision 2005/387/JHA).”
