

## BMF 32 - Plasticizers: Phthalates and Adipates

Phthalate and adipate esters are widely used as surfactants and in food and personal care products as plasticizers. Phthalates and adipates are also found in food as a result of leakage into food containers. Chiron offers a wide range of analytically pure deuterated and native phthalates and adipates, as well as mixes. Custom made mixes are available on request.

### Metabolites: Phthalate biomarkers

It has been shown that dialkylphthalates are metabolized in the body to endocrine-active monoalkyl-phthalates, and appears to be linked with the prevalence of abdominal obesity and insulin resistance in men.

### General information

Neat Compounds: Most of the compounds are also available in neat form. Please inquire for an offer.

Custom solutions: Please inquire for custom solution of the plasticizers. Please inquire if you have need for others. Other labelled plasticizers are available upon request (deuterium or <sup>13</sup>C). Description of pr. no.: iso-octane (IO), isopropanol (IP), n-hexane (HX), mixture of solvents (MX).
