

Carfentanil (Carfentanyl)

BMF 86 - Carfentanil

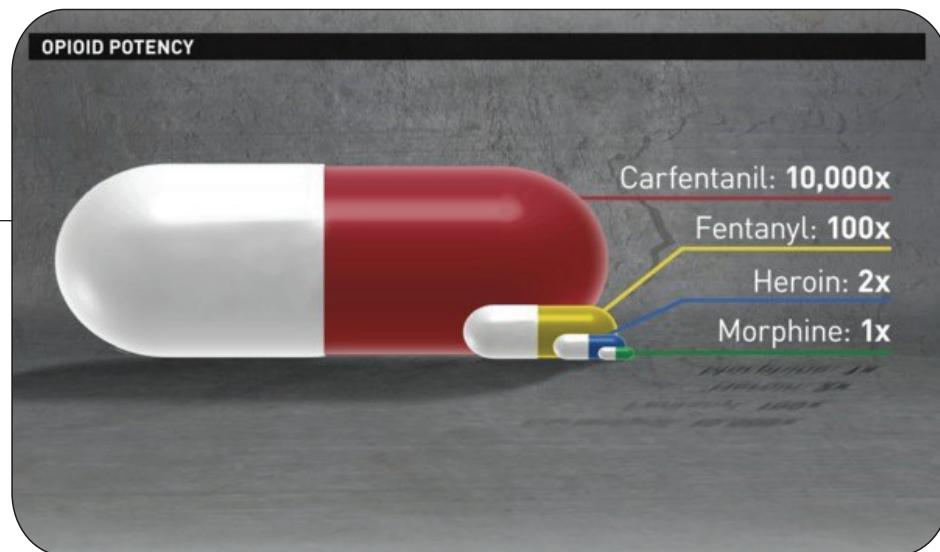

Carfentanil, first synthesized by Janssen Pharmaceuticals in 1974, is an ultra-potent synthetic opioid. It is the most powerful opioid commercially available, being 10,000 times stronger than morphine and 100 times more potent than fentanyl. It can be fatal in the low to sub milligram range. Carfentanil is not approved for human use, but is instead intended for use in veterinary practice, to rapidly incapacitate large animals.

Carfentanil was implicated in the 2002 Moscow theatre seige. An aerosol of carfentanil, and another powerful opioid; remifentanil, was infused into the building by Russian special forces with the intention of subduing Chechen terrorists. Unfortunately the potency and duration of action of the concoction was underestimated, and resulted in the death of 125 hostages through inadequate after care.

More recently carfentanil has been identified as an adulterant in heroin. In the US it resulted in a spate of overdoses in Ohio and elsewhere, triggering the U.S. Drug Enforcement Administration to initiate a public health emergency.

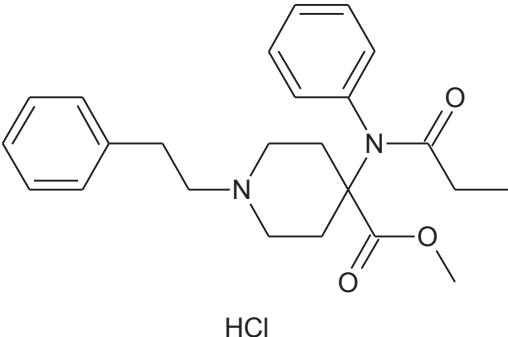

Severe toxicity may occur from exposure through injection, ingestion or skin contact. Unconsciousness may occur within minutes, and could lead to death from respiratory depression (Toxbase). Signs of exposure include nausea, vomiting, drowsiness, disorientation, sedation, pinpoint pupils and clammy skin. Naloxone is the recommended antidote for carfentanil exposure, and is available as a nasal spray and intramuscular injection.

The potency of this compound poses a significant threat to those who come into contact with it, including police, customs officials and laboratory personnel. Extreme caution should be exercised when handling this material. A full risk assessment is advised. End users are urged to familiarise themselves with the safety data sheet (SDS) before contact. Appropriate personal protective equipment should be in place to prevent accidental exposure.

BMF 86 - Carfentanil

Compound: Carfentanil hydrochloride	
Chemical name: 4-Piperidinecarboxylic acid, 4-[(1-oxopropyl)phenylamino]-1-(2-phenylethyl)-, methyl ester	
Synonym(s): Carfentanyl, R 31833, Wildnil®	
CAS: 59708-52-0 (free base)	
Molecular formula: C ₂₄ H ₃₀ N ₂ O ₃ x HCl	
MW (g/mol): 430.97 (as salt), 394.51 (as free base)	

Chiron recently completed the synthesis of a carfentanil certified reference material:

Compound	Part No.	Concentration	Solvent	Qty
Carfentanil hydrochloride 59708-52-0 (free base)	11883.24-100-ME	100 µg base/mL	methanol	1 mL
	11883.24-K-ME	1000 µg base/mL	methanol	1 mL
	11883.24-5MG	neat	neat	5 mg
	11883.24-10MG	neat	neat	10 mg

Compound	Part No.	Concentration	Solvent	Qty
Carfentanil precursor 1863947-94-7	12215.28-K-ME	1000 µg/mL	methanol	1 mL
	12215.28-5-MG	neat	neat	5 mg
Norcarfentanil hydrochloride 61085-87-8	12223.16-K-ME	1000 µg/mL	methanol	1 mL
	12223.16-5MG	neat	neat	5 mg
N-Methylcarfentanil hydrochloride 59708-50-8 (free base)	12224.17-K-ME	1000 µg/mL	methanol	1 mL
	12224.17-5MG	neat	neat	5 mg
